Add the Panopto LTI in D2L

- Log in to D2L (d2l.gsu.edu)
- If you are a technician assisting a professor, have them login to D2L using their credentials.

- Select the course from “My Courses”

- Click “Resources”, and then select “Course Builder”
Drag the “Create a Module” icon into course folder.

Name the module and then click “Create”

Drag the “Create a Link” icon into the newly created module
Choose ‘External Learning Tools’

Choose Panopto, and then click “Save” back on the “New Quicklink” screen.

Click on the “Content” tab
Under “Table of Contents” (on the left), click on the folder/module you created for Panopto recordings.

Click the dropdown arrow next to “Panopto” (center of screen), and then select “Edit Properties”.

Place a check in the box, “Open in New Window”

Once saved, click on “Panopto”. \textbf{(Note: you may need to click to something else in the table of contents, and then click back to the “Panopto Recordings” tab)}
This will automatically provision the instructor account as a “creator” for that folder (the course). Once taken to Panopto, you’ll see the folder for the D2L course you are in.

To download the Panopto recorder (Mac & PC clients available), click on “Download Recorder” in the top right portion of the screen.

To view content, simply click on the file you wish to play.
